PCintro percent chance intro
Introduction: The next questions ask about the percent chance of things happening. The percent chance
can be thought of as the number of chances out of 100. You can use any number between 0 and 100. For
example, numbers like: 2 and 5 percent may be "almost no chance", 20 percent or so may mean "not
much chance", a 45 or 55 percent chance may be a "pretty even chance", 80 percent or so may
mean a "very good chance", and a 95 or 98 percent chance may be "almost certain"
